

# AI Asset Setup

## ASSETS MADE EASY.

Managing hotel assets has always meant slow, manual data entry— typing in make, model, and serial numbers one by one. It's time consuming, error-prone, and often the biggest barrier to smooth onboarding and team adoption of asset management tools.

That's why we built AI Asset Setup. Instead of capturing your asset information line by line in order to have asset information at your fingertips, you can now capture an asset with a quick photo. Our AI scans the image, identifies the key details, and automatically builds a complete asset profile for you.

This makes asset setup faster, more reliable, and far easier to scale excellence and consistency. That means your team spends less time on data entry and more time keeping the hotel running.

## KEY BENEFITS

### Save Time

Eliminate hours of manual entry by letting AI build complete asset profiles from photos. Your team spends less time typing and more time keeping the property operating.

### Ensure Accuracy

No more squinting at tiny serial numbers or confusing a "B" for an "8." AI captures details directly from photos of the asset, ensuring reliable, error-free records every time.

### See Value Faster

Onboarding shouldn't be blocked by data entry. With photo capture, get teams up and running quickly so they can experience the full value of Transcendent right away.

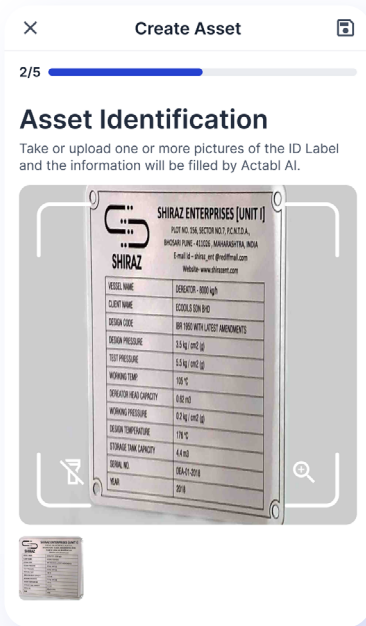

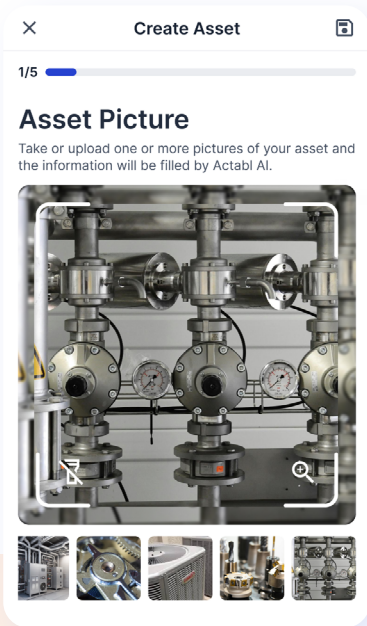

### Scale with Ease

Whether managing one property or an entire portfolio, asset information stays consistent. When every team captures data the same way, your asset information stays clean and scaling becomes effortless.

# From Photos to Profiles.

Gather your asset information in seconds with a few quick photos.

## Step 1: SNAP IT

Capture a few photos of the asset and asset information, including ID plates, labels, and QR code, to record every important detail.

Actabl AI will use details from the images to create an Asset Profile.

## Step 2: NAME IT

Actabl AI will interpret the photos and suggest the Asset Type to be saved under.

Keeping data consistent across your team and portfolio.

## Step 3: SAVE IT

A complete asset profile is created instantly.

Accurate, uniform, and ready to use right away.
